Cooled Polishing Wheels (Poliroval'nyye krugi s

okhlazhdeniyem)

PERIODICAL:

Mashinostroitel', 1959, Nr 3, p 32 (USSR)

ABSTRACT:

Fabric polishing wheels are extensively used for polishing electro-plated automobile parts at the Gor'kiy Automobile Plant. The wheels rapidly wear down from 400 - 450 mm to 250 mm and become inefficient and unsafe because of overheating. The article describes a new hub for the polishing wheels introduced at the plant, consisting of two discs connected with a center bush and provided with 6 ventilation holes, 6 vanes for driving the sucked-in air to the wheel periphery, and 19 studs for attaching the fabric. The design permits re-use of the fabric discs from worn wheels, by folding them into right-angle sectors and attaching on studs. This, and the air cooling, make

Card 1/2

SOV/117-59-3-21/37

Cooled Polishing Wheels

the hub highly commercial. The estimated annual economy entailed in the plant's car body plating shop alone amounts to 300,000 rubles. There is 1 photo.

Title

New varieties of frost-resisting grapes

Periodical : Priroda 44/1, 106--109, Jan 1955

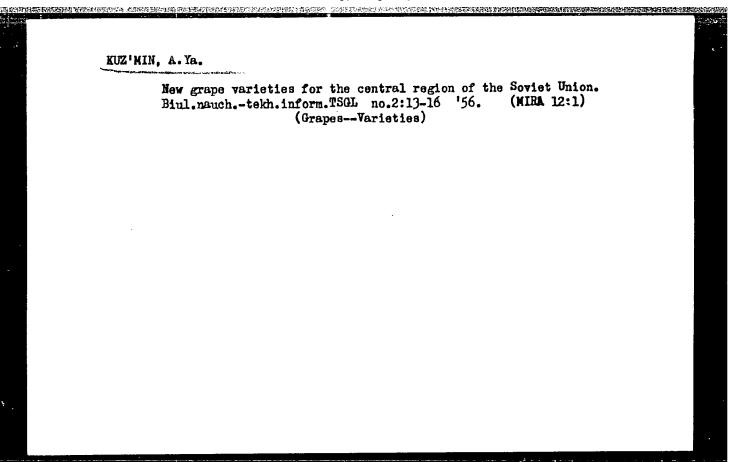

Abstract

An account is given of how the I. V. Michurin Laboratory experimented with the hybridization of grapes in order to develop varieties that would not be harmed by late spring frosts. Two of the successful varieties resulting from these experiments are the "Tambov Pink" and the "Nagrada" (Reward). The characteristics of these grapes are described in detail.

Three USSR references (1937--1946). Illustrations

Abstract: Triploid (2n=24), adequately fertile current plants

with viable seeds were obtained for the first time at the Central Genetics Laboratory (Michurinsk) by hybridization of the red current with black. In diploid seedlings of the first generation, plants with tetraploid set of chromosomes (2m=32) were found.

Title

Creation of an economic quality of grapes of the variety "Nagrada" (reward)

Periodical :

Priroda 45/1, 98-100, Jan 56

Abstract

An account is given of the creation of a new variety of grapes, the Nagrada (Elite No. 8), by crossing three varieties, the Amur, the Labruska (Black Concord) and European (Yezandari White). Details are given as to the proparation of the soil, fertilization, work of selecting and attending, and the results obtained as to the size of the fruit and bunches and other points in which the new variety is superior to the parent stock. Illustrations. Three Soviet references (1948).

AUTHOR:

Kuz'min, D.I.

SOV/91-58-2-28/31

TITLE:

On Installing Klinger Glasses on Water Gages (Ob ustanovke stekol Klingera v vodoukazatel'-

nykh priborakh)

PERIODICAL:

Energetik, 1958, Nr 2, p 37-38 (USSR)

ABSTRACT:

The author answers a question put by F.V. Vasil'yev from the Yllymakh settlement, Aldan rayon, on how must the glass be fitted into

the water gage?

KUZ'NIN, W.S.

"Comparative Evaluation of the Effectiveness of Certain Methods for the Therapy of Chronic Leukosis Report 1: Therapy of Chronic Leukosis by X Rays," by Prof S. I. Sherman, Docent D. S. Kuz'min, L. M. Rozanova, A. N. Kiseleva, N. S. Fovergo, and A. D. Vaku-Ienko (Reported at the expanded plenum of the Central Order of Lenin Institute of Hematology and Blood Transfusion on 15 Dec 1954 and at the Conference of the Leningrad Department of the All-Union Therapeutic Society imeni S. P. Botkin on 15 Nov 1955), Problemy Gematologii i Perelivaniya Krovi, Vol 2, No 1, Jan/Feb 57, pp 28-32

Experimental results classified into two tables showing the response of myelosis and lymphadenosis indicate that prolonged fractional irradiation of patients suffering from chronic leukosis with small doses of X tion of patients suffering from chronic leukosis with small doses of X rays (100 r) in combination with transfusion of concentrated suspensions of erythrocytes is the most expedient and effective method. This method gives good therapeutic effects without complications such as symptoms of radiation sickness.
